

Ekits -Clock Designer

UNLIMITED Site licence edition

The Clock face designer software is a standalone application. As such there is not a separate version of the software for networks. The software is intended to be installed individually on each machine.

To speed up the installation process use one of the following methods:

1. Copy the contents of the CD to a folder on your server and share the folder so it is available to the machines you want to install the software on. Run the installer application from the shared folder on the server and install on the local machines.
2. Alternatively insert the CD in the servers CD drive and share the CD drive. Then access the servers CD drive and run the install application to install on the local machine.
3. For advanced network installation, the Microsoft Windows Installer provides alternative methods for creating and advertising network installations, in particular using `msiexec` with the appropriate command line switches :

`/a` - Create administrator / network installation
`/c` - Advertise product, Windows Server

If you are unsure about the use of these command line switches, please refer to the Microsoft Windows Installer documentation.
